

## SSDC Class 11<sup>th</sup> June 2021

### What we did in class:

- Discussion over the portfolio websites created by SSDC members and suggested improvements

### Things to keep in mind while creating websites:

- You should have a **fav icon** (icon show in the tab)
- Use **logo** if you have otherwise, create it on logo maker websites. Logo can be of your name initials or whatever you like.
- Keep the **alignment** proper, keep it standard across the website i.e. either centre, left or right
- No **login or signup** button on static website
- Use **small social media** icons and use icons instead of names
- Remove **contact form** from static website or apply proper **mailto** attributes to make it working
- All the **links** on website should be working properly
- Try to make **cards** of equal height or use masonry grid type.
- Decide proper **colour scheme, font size and family** and keep it standard in whole website
- Keep **image ratio** proper so that it should not be seen as stretched.
- Use **effects** such as grow, pulse, shadow etc. on icons images when we hover on them.
- Use translucent **icons** such that when you **hover** over them, they are seen with full opacity and this gives feel of some effect.
- Use proper **padding and margin**.

### Read about:

- Masonry grid
- Meta tag in HTML <https://css-tricks.com/essential-meta-tags-social-media/>
